

## Metric Spaces

Decide whether or not each of the following pairs  $(X, d)$  are metric spaces. Simply write "Yes" or "No." You do not need to give any proofs or make any arguments at this time.

In 1-5,  $a, b \in \mathbb{R}$  are real numbers.

1.  $(X, d)$  where  $X = \mathbb{R}$  and  $d(a, b) = 1$  if  $a \neq b$  and  $d(a, b) = 0$  if  $a = b$
2.  $(X, d)$  where  $X = \mathbb{R}$  and  $d(a, b) = |a^2 - b^2|$
3.  $(X, d)$  where  $X = \mathbb{R}$  and  $d(a, b) = |a^3 - b^3|$
4.  $(X, d)$  where  $X = \mathbb{R}$  and  $d(a, b) = \max(a, b)$
5.  $(X, d)$  where  $X = \mathbb{R}$  and  $d(a, b) = \max(|a|, |b|)$

In 6-10,  $a, b \in \mathbb{R}^2$  have the form  $a = (x_1, y_1)$  and  $b = (x_2, y_2)$ .

6.  $(X, d)$  where  $X = \mathbb{R}^2$  and  $d(a, b) = \max(|x_1 - x_2|, |y_1 - y_2|)$
7.  $(X, d)$  where  $X = \mathbb{R}^2$  and  $d(a, b) = (x_1 - x_2)^2 + (y_1 - y_2)^2$
8.  $(X, d)$  where  $X = \mathbb{R}^2$  and  $d(a, b) = \sqrt[3]{(x_1 - x_2)^3 + (y_1 - y_2)^3}$
9.  $(X, d)$  where  $X = \mathbb{R}^2$  and  $d(a, b) = \sqrt{(x_1 - x_2)^2 + (y_1 - y_2)^2}$  if  $a$  and  $b$  lie on the same line through the origin and  $d(a, b) = \sqrt{(x_1)^2 + (y_1)^2} + \sqrt{(x_2)^2 + (y_2)^2}$  otherwise
10.  $(X, d)$  where  $X = \mathbb{R}^2$  and  $d(a, b) = 1$
